Land Transport

1. Soviet transports moving east in Poland were more intense during September and October 1947, with September showing the most for the period from June through October. More specifically, they were:

Point of Observation	September	October
(a) Gdansk	112 transports	75 transports
(b) Bydgoszcz	70	100
(c) Poznan	65	
(d) Wroclaw	118	
(e) Katowice	132	160
(f) Lodz	60	128
(g) Warsaw	574	179

Most carried dismantled factories (mainly chemical), trucks and automobiles, road-building equipment, railroad cars and "Flora" (gondolas) (170 new gondolas rolled through Warsaw).

2. Appearance of underground 60 cm diameter sewer pipes and electric cable in 17 of the transports provides evidence that removal of equipment from Germany is being speeded up. In late September much armored equipment cut into scrap was noted. Increased train movements, carrying mostly rails, cement and coal, were noted along the Kalyetok-Bresztowica line. All trains are escorted by Soviet Army personnel and are closely connected with construction of strategic defenses and new railroad lines, probably on the eastern border of Poland.

Sea Transport

3. The following shipments were sent east from Gdansk between 1 Sep and 15 Oct 47:
